

Name	Astoria	A
Typology	Pendant light	
Designer	Andrea Steidl	

Description	Astoria takes inspiration from the front grille of 1930s cars in which the headlights gave a peculiar personality. The lamp is composed of a thin aluminium structure and two solid transparent cylinders. Those blocks of material grafted onto the arc shape create a visual balance play between curved and tensioned lines. The LED light spreads through the solid bodies and completes the arch shape by crystallising their presence in a transparent shape.
